# B2B Lead Funnel: Conversion, Speed & Rep Output

📊 Funnel KPIs | AI Funnel Copilot | Lead Mix Simulator

Leads

All leads | 2018 leads

| MQLs | Deals won | Conversion | Median days to close | Closed within 30 days |
|---|---|---|---|---|
| 8,000 | 842 | 10.5% | 14 | 66% |
| marketing-qualifie… | 32 SDRs · 22 reps | MQL to signed seller | first contact to signed | of won deals |

## Which lead sources convert

MQL-to-deal conversion by source, with 95% intervals. Blue beats the overall rate, red trails it. Small sources have wide intervals: don't over-read them.

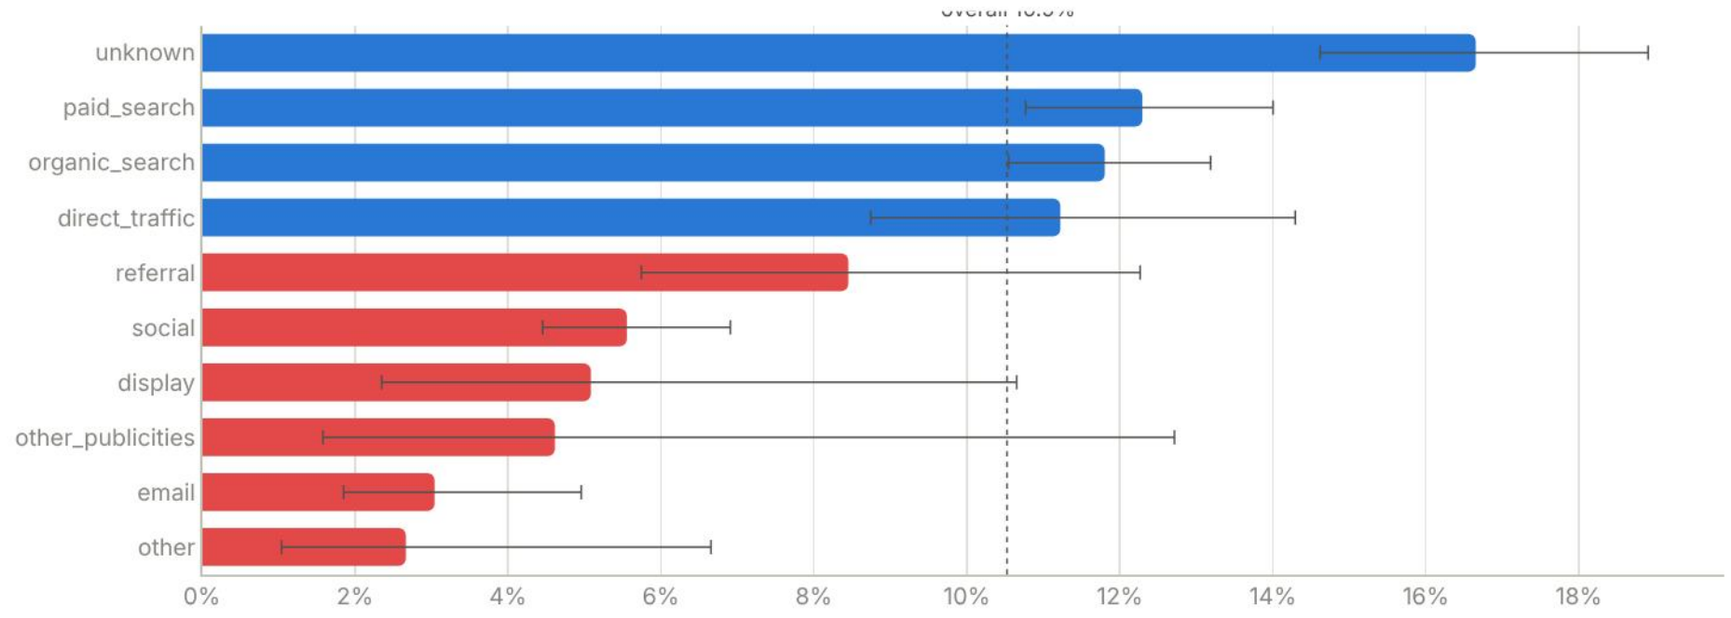

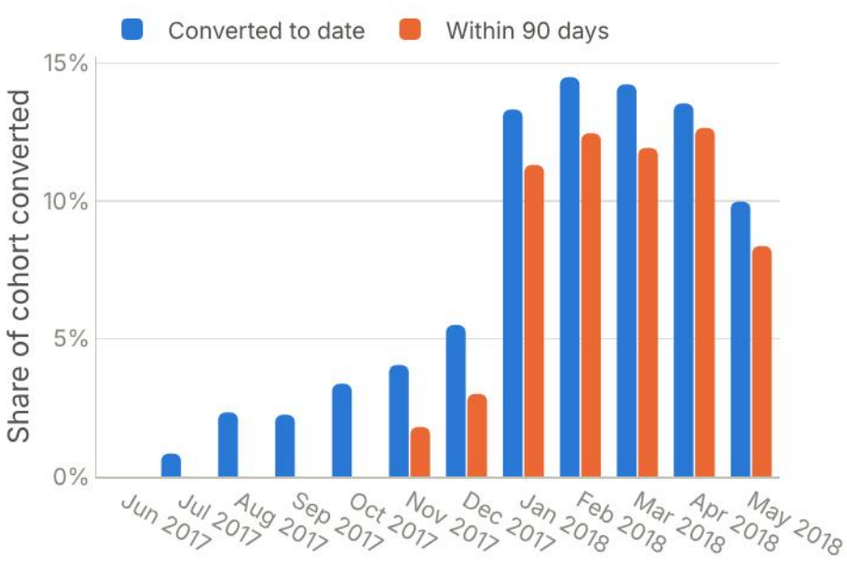

Table view

## Conversion by lead cohort

Month of first contact. The 90-day bar only appears once every lead in the cohort is 90+ days old. Look at the jump in January 2018.

## Speed to close by cohort

Median days from first contact to signed, won deals only. 2017 leads waited months for the sales team to reach them.

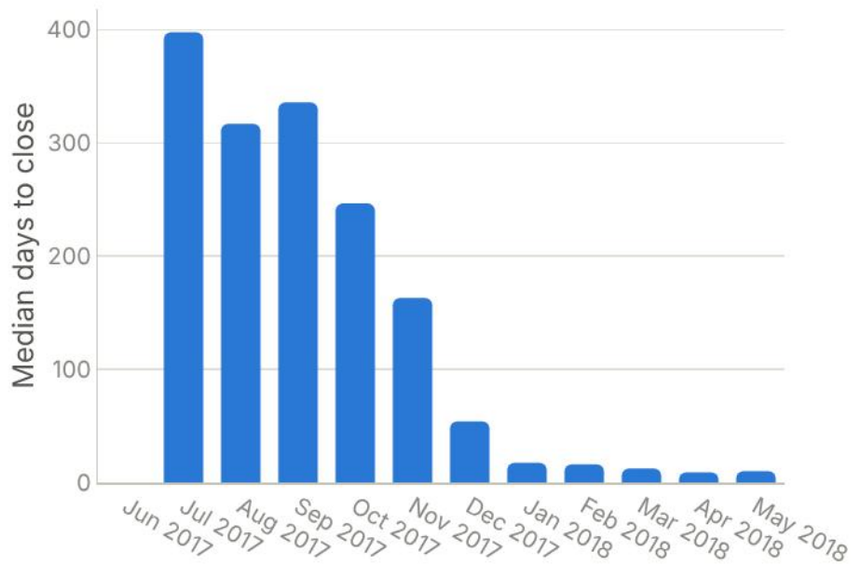

Table view

## SDR output

Deals won per SDR (top 15). The data only names reps on won deals, so this is volume and speed, not a conversion rate.

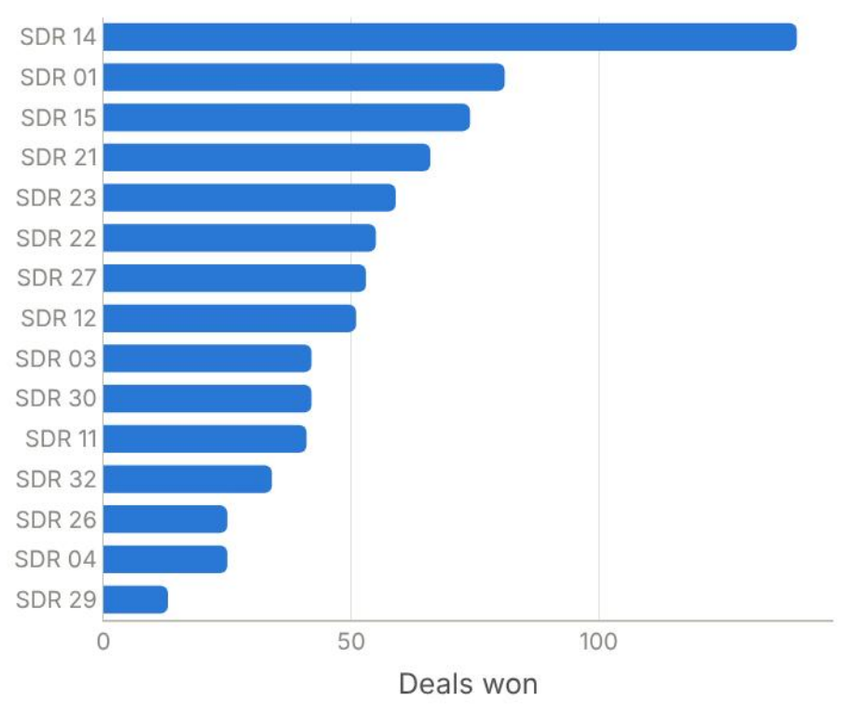

Table view

## Closer output

Deals won per sales rep (top 15), same caveat.

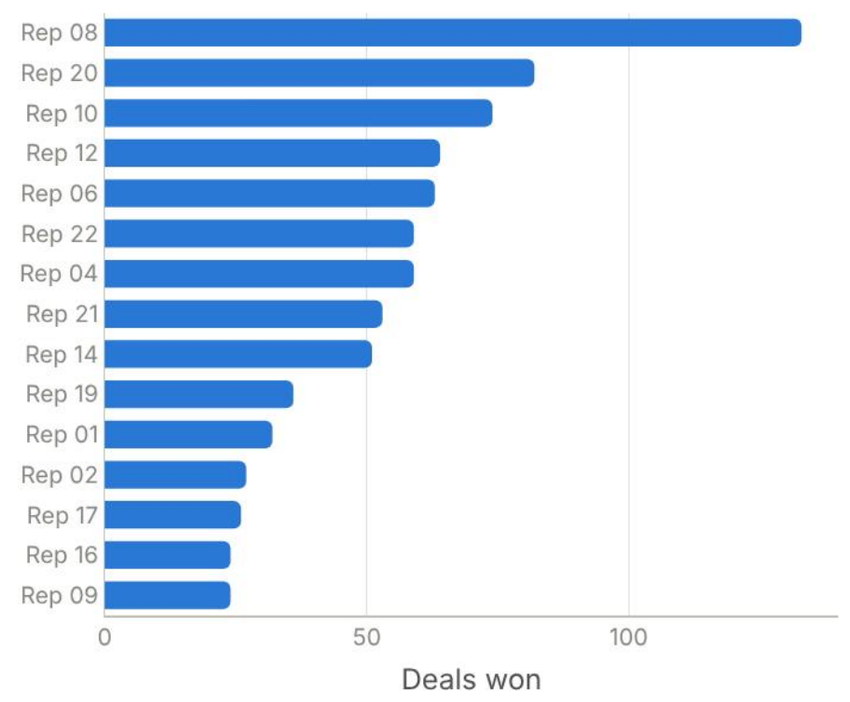

Table view

Won deals by business segment (table view)

📊 Funnel KPIs | AI Funnel Copilot | 🎛️ Lead Mix Simulator

Ask in plain English. A local **llama3.2** model writes read-only SQL against the funnel marts, runs it, and summarizes. Expect about 45–110 s per answer on a laptop CPU. Every query and its result table is shown, and figures that don't match the data are flagged.

📊 Funnel KPIs | AI Funnel Copilot | 🎛️ Lead Mix Simulator

Plan next month's lead volume. Expected deals = planned MQLs from each source × that source's conversion rate from 2018 leads (after the sales team ramped). The baseline keeps today's mix at your volume, so the deltas show the effect of the levers alone.

MQLs per month

1200

### Shift the mix

Move volume from
